

## Mazda MX-5 Matte and Black Special Edition

**Mazda** have been releasing different special edition models around the world to celebrate the 20th Anniversary of the hugely successful MX-5. The latest is unashamedly targeted as a fashion accessory. The press images are interesting, featuring a model with swords and looking as though she has just stepped out of Final Fantasy XIII. The car wouldn't look out of place in that fantasy world either.

This french only edition has styling by design label LK by Laure Kczekotowska Paris which apparently includes bling such as rhinestones, gems, and crystals. It must be on the inside.

Running gear and performance remains the same as standard generation 3 car that was first launch in 2006. There is little to complain about - it looks stunning - my wife loves it and I wouldn't

mind being seen driving it. I just wish Mazda would release a hardcore drivers version as one of their special editions.
